

1. TERM REPORT COMPONENT

1.1 Handling No-Shows and Cancellations

No-shows can negatively affect restaurant operations. The system can handle this using the following strategies:

- Automatic cancellation if the customer does not arrive within a specified grace period (e.g., 15 minutes).
- Sending reminders via SMS or email prior to the reservation time.
- Maintaining a customer history to identify frequent no-shows.
- Allowing customers to cancel or modify reservations through the system.

These strategies help optimize table usage and improve service efficiency.

1.2 Integration with POS Systems

Integration with Point of Sale (POS) systems can enhance restaurant operations.

Possible Integrations:

- Sync reservations with real-time table availability.
- Update table status when customers are seated.
- Link reservations with billing and order management.

Benefits:

- Improved coordination between front-of-house and kitchen staff.
- Better customer experience.
- Real-time operational insights.

1.3 Mobile Responsiveness Considerations

The system is designed to be accessible on mobile devices.

Key Considerations:

- Responsive layout using CSS frameworks such as Bootstrap.
- Mobile-friendly forms with large input fields.
- Easy navigation and minimal page load times.
- Compatibility with different screen sizes.

Benefits:

- Enables customers to book tables on the go.
- Enhances user experience.
- Increases accessibility and usability.
